CIRCULARS

1. Verification of Standards and Measuring Instruments.
2. Measurements of Length and Area, Including Thermal Expansion.
3. Verification of Standards of Mass.
4. Verification of Standards of Capacity.
5. Testing of Clinical Thermometers.
6. Fees for Electric, Magnetic, and Photometric Testing.
7. Pyrometer Testing and Heat Measurements.
8. Testing of Thermometers.
9. Testing of Glass Volumetric Apparatus.
10. Legal Weights (in pounds) per Bushel of Various Commodities.
11. The Standardization of Bomb Calorimeters.
12. Verification of Polariscopic Apparatus.
13. Standard Specifications for the Purchase of Incandescent Lamps.
14. Samples of Analyzed Irons and Steels—Methods of Analysis.
15. A Proposed International Unit of Light.
16. The Testing of Hydrometers.
17. Magnetic Testing.
18. Standard Gauge for Sheet and Plate Iron and Steel.
19. Standard Density and Volumetric Tables.
20. Electrical Measuring Instruments.
21. Precision Measurements of Resistance and Electromotive Force.
22. Standard Specifications for Transformers, Oil-immersed, Self-cooled, 60-cycle, 2200 Volts.
23. Standardization of Electrical Practice in Mines.
24. Publications of the Bureau of Standards.
25. Standard Analyzed Samples—General Information.
26. Analyzed Iron and Manganese Ores—Methods of Analysis.
27. The Testing and Properties of Optical Instruments.
28. The Determination of the Optical Properties of Materials.
29. Announcement of a Change in the Value of the International Volt.
30. Lime: Its Properties and Uses.
31. Copper Wire Tables.
32. Standards for Gas Service.
33. United States Government Specification for Portland Cement.
34. The Relation of the Horsepower to the Kilowatt.
35. Melting Points of Chemical Elements.
36. The Testing and Properties of Electrical Condensers.
37. Electric Wire and Cable Terminology.
38. The Physical Testing of Mechanical Rubber Goods.
39. Specifications for and Measurement of Standard Sieves.
40. Sodium Oxalate as a Standard in Volumetric Analysis.
41. Testing and Properties of Textile Materials.
42. Metallographic Testing.
43. The Metric Carat.
44. Polarimetry.
45. The Testing of Materials.
46. Testing of Barometers.
47. Units of Weight and Measure; Definitions and Tables of Equivalents.
48. Standard Methods of Gas Testing.
49. Safety Rules to be Observed in the Operation of Electrical Equipment and Lines.
50. National Standard Hose Couplings and Fittings for Public Fire Service.
51. Measurement of Time and Tests of Timepieces.
52. Regulation of Electrotyping Solutions.
53. The Composition, Properties, and Testing of Printing Inks.
54. Proposed National Electrical Safety Code.
55. Measurements for the Household.
56. Standards for Electric Service.
57. United States Standard Tables for Petroleum Oils.

INTRODUCTION

BASIS OF THE TABLES

The expansion tables contained in this circular are based upon the results of experiments carried on at this Bureau between July, 1912, and December, 1914. During that time about 100 samples of crude and refined petroleum oils from various parts of the United States were examined and their densities determined at various temperatures.

This investigation has shown that within the limits of ordinary measurements the rate of change of specific gravity with change of temperature is the same for all oils of the same specific gravity. In the calculation of the expansion tables (Tables 1, 2, and 3) the average rate of expansion found for all oils of each designated specific gravity has been used.

Tables 4 and 5 depend only upon assumed standard values and fixed relations, and the rate of expansion of the oil does not enter into their calculation. The relations involved are as follows:

(a) The Baumé scale, for liquids lighter than water, is based upon the following relation to specific gravity:¹

$$\text{Degrees Baumé} = \frac{140}{\text{Sp. gr. } 60^{\circ}/60^{\circ} \text{ F}} - 130$$

or,

$$\text{Sp. gr. } 60^{\circ}/60^{\circ} = \frac{140}{130 + \text{deg. B.}}$$

(b) Specific gravity, as used in this circular, is defined as the ratio of the weight (in vacuo) of equal volumes of oil and of water at 60° F—that is, the true and not the apparent specific gravity is employed throughout the circular.

(c) The weight per gallon of oil is the apparent weight of a volume of 231 cubic inches of oil at 60° F when weighed in air of 50 per cent humidity, at the same temperature as the oil, and at a pressure of 760 mm of mercury. The weighing is also assumed to be made against brass weights of 8.4 density or against weights reduced to that basis..

(d) The weight of a gallon of water at 60° F is as follows: In air, 8.32823 pounds; in vacuo, 8.33722 pounds.

On account of the way specific gravity is defined, it is necessary to apply a buoyancy correction to the product of the specific gravity of the oil and the weight of a gallon of water in order to obtain the apparent weight of a gallon of oil in air at 60° F.

APPLICABILITY OF THE TABLES

The tables contained in this circular apply to all petroleum oils, both crude and refined, produced in the United States. Each grade of oil, gasoline, illuminating oil, lubricating and fuel oil, etc., falls into its proper place in the tables by reason of its specific gravity.²

Although it is generally believed that California oils have a considerably higher rate of expansion than do oils from the Central and Eastern States, this has not been found to be the case, and the slightly higher rate is not sufficient to cause an appreciable error in results carried only to the degree of accuracy here given.

¹ This relation between Baumé degrees and specific gravity has been in use by the Bureau of Standards since 1904, at which time it was found to be the one in common use in the oil trade throughout the United States.

² In the case of oils containing paraffin or other materials that become solid at low temperatures the expansion shown by the tables is somewhat too small at temperatures below the point of solidification.

METHOD OF READING THE HYDROMETER

The correct method of reading the hydrometer is illustrated in Figs. 1 and 2. The sample of oil is placed in a clear glass jar or cylinder and the hydrometer carefully immersed in it to a point slightly below that to which it naturally sinks, and is then allowed to float freely.

The reading should not be taken until the oil and the hydrometer are free from air bubbles and are at rest.

In taking the reading the eye should be placed slightly below the plane of the surface of the oil (Fig. 1) and then raised slowly until this surface, seen as an ellipse, becomes a straight line (Fig. 2). The point at which this line cuts the hydrometer scale should be taken as the reading of the instrument (Fig. 2).

In case the oil is not sufficiently clear to allow the reading to be made as above described, it will be necessary to read from above the oil surface and to estimate as accurately as possible the point to which the oil rises on the hydrometer stem. It should be remembered, however, that the instrument is calibrated to give correct indications when read at the principal surface of the liquid. It will be necessary, therefore, to correct the reading at the upper meniscus by an amount equal to the height to which the oil creeps up on the stem of the hydrometer. The amount of this correction may be determined with sufficient accuracy for most purposes by taking a few readings on the upper and the lower meniscus in a clear oil and noting the differences.

A specific gravity hydrometer will read too low and a Baumé hydrometer too high when read at the upper edge of the meniscus. The correction for meniscus height should therefore be added to a specific gravity reading and subtracted from a Baumé reading.

The magnitude of the correction will obviously depend upon the length and value of the subdivisions of the hydrometer scale and must be determined in each case for the particular hydrometer in question.

A report of the experimental investigation upon which are based the expansion tables contained in this circular will be published separately as a Technologic Paper of the Bureau of Standards, entitled "Density and Thermal Expansion of American Petroleum Oils."

WASHINGTON, August 11, 1915.

FIG. 1

FIG. 2

PETROLEUM OIL TABLES 1 TO 5

TABLE 1

[This table shows the specific gravities at 60°/60° F of oils having, at the designated temperatures, the observed specific gravities indicated. For example, if the observed specific gravity is 0.610 at 80° F, the true specific gravity at 60°/60° F will be 0.621. The headings "Observed specific gravity" and "Observed temperature" signify the true indication of the hydrometer and the true temperature of the oil; that is, the observed readings corrected, if necessary, for instrumental errors.]

TABLE 2

[This table shows the degrees Baumé at 60° F of oils having, at the designated temperatures, the observed degrees Baumé indicated. For example, if the observed degrees Baumé is 20.0 at 78° F, the true degrees Baumé at 60° F will be 19.0. Intermediate values not given in the table may be conveniently interpolated. For example, if the observed degrees Baumé is 20.4 at 78° F, the true degrees Baumé at 60° F will be 19.4. The headings "Observed degrees Baumé" and "Observed temperature" signify the true indication of the hydrometer and the true temperature of the oil—that is, the observed readings corrected, if necessary, for instrumental errors.]

Observed temperature in ° F	Observed degrees Baumé									
	17.0	18.0	19.0	20.0	21.0	22.0	23.0	24.0	25.0	26.0

TABLE 3

[This table shows the volume that would be occupied at 60° F by a quantity of oil, of various specific gravities, occupying unit volume at the designated temperatures. For example, if the observed specific gravity is 0.650 at 98° F, 1 gallon of oil measured at 98° F will occupy a volume of 0.971 gallons at 60° F. The headings "Observed specific gravity" and "Observed temperature" signify the true indication of the hydrometer and the true temperature of the oil; that is, the observed readings corrected, if necessary, for instrumental errors.]

Observed temperature in ° F	Observed specific gravity								
	0.620	0.630	0.640	0.650	0.660	0.670	0.680	0.690	0.700
